

Missing work
again...and girls'
night...I just want
my life back!

ENDOMETRIOSIS PAIN?

Don't suffer in silence. We hear you.

Maybe you're experiencing some of these symptoms:

- Pain 1-3 days before
- Pain that is regularly and increasingly severe during your period (often lasting 3-5 days)
- Pain with cramps, pelvic pain, fatigue and general aches and soreness just before, during and after your period
- Pain during sex, intercourse or standing, bending, or sitting
- Pain with your periods that interferes with your normal activities

Endometriosis: Pain That's Not Normal

The endometriosis is the cause. Endometriosis causes regular and irregular pain, including during menstruation. The pain is often described as burning, stabbing or cramping. You'll know you have endometriosis if you experience these symptoms.

If you experience the above symptoms and feel overwhelmed, it's time to seek help. We'll provide you with the right care, help with your symptoms and help you live your best life.
