

Missing work  
again...and girls'  
night...I just want  
my life back!

## ENDOMETRIOSIS PAIN? Don't suffer in silence. We hear you.

Endometriosis is a painful condition that affects 10% of women.

- For 100 years it was thought that a woman's endometrial cells could travel through the bloodstream and implant themselves in other parts of the body.
- Now we know that's not true. Endometriosis is a complex condition that is still being researched.
- It can cause pelvic pain, heavy or irregular periods, and infertility.
- It can also cause inflammation, which can lead to chronic pain.
- And, with the right treatment, you can get your life back.

### Endometriosis: The End of the Road?

The endometriosis is a chronic condition that causes pelvic pain and heavy periods. It is a complex condition that is still being researched. It can cause pelvic pain, heavy or irregular periods, and infertility.

If you are experiencing these symptoms, you should see a doctor. They can help you understand your condition and provide you with the best treatment options.
