

The process of user sign-up, or **registration**, is a key element of any performance-based system. When performance-based systems are used for financial goals, both users and system designers need to be clear about the system's role in the user's overall financial goals. For example, users may want to use the system to track their progress toward a goal, but they may not want to use the system to track their progress toward a goal. The system designer needs to understand the user's overall financial goals and the system's role in those goals.

### Registration

1. The system designer should consider the user's overall financial goals and the system's role in those goals.
2. Consider the user's overall financial goals and the system's role in those goals.
3. Consider the user's overall financial goals and the system's role in those goals. It is possible that the user may want to use the system to track their progress toward a goal, but they may not want to use the system to track their progress toward a goal.

The image shows a 'Sign Up' form with the following fields:

- Name: [Text input field]
- Email: [Text input field]
- Password: [Text input field]
- Confirm Password: [Text input field]

Below the fields is a 'Sign Up' button. The form is set against a light gray background.

4. **Multiple users per device** (if not applicable, you may need to add a note to the user's account)

The image shows a user account settings page with the following elements:

- Message: Thank you for creating your account with us.
- Multiple users per device:  (checked)
- Strength: Default
- Country: United States of America

At the bottom, there is a 'Save' button.
