

The process of user sign-up, or **registration**, is a key element of any performance-based system. When performance-based systems are used for financial goals, both users and providers need to be able to register and get their accounts set up. It is critical to set up the system with the user's best interests in mind. This means that the system should be designed to be as easy as possible for the user to use. The user should be able to register and get their account set up in a matter of minutes, and the system should be able to handle a large number of users.

Requirements

1. The system should be able to handle a large number of users.
2. The system should be able to handle a large number of users.
3. The system should be able to handle a large number of users. It should be able to handle a large number of users. It should be able to handle a large number of users. It should be able to handle a large number of users.

The image shows a 'Sign Up' form with the following fields:
