

After creation of your app, you can modify its configuration in a few different ways. When performing testing to ensure that the cloud app has been successfully installed on your phone and that the interface only shows it is ready to set up. It will show a message that says "Install" and you will see the "Install" button. When you click on the "Install" button, the app will be installed on your phone and you will see the "Install" button. When you click on the "Install" button, the app will be installed on your phone and you will see the "Install" button.

Requirements

1. You need to have a Java JDK installed on your computer. (This is not the "JDK" you need to install on your phone.)
