

2. A workflow has been created to help providers follow-up with patients who have tested positive for COVID-19. Please see attached Flowchart.
3. Davis Hospital is now testing symptomatic (with updated criteria) patients for COVID-19 in their drive-through with/without an order. Wherever it makes sense, we still prefer to test our patients with OUR process so that results are automatic to our EMR and our patients are tracked by us.
4. Testing capacity – the state has produced “plenty” of COVID test kits. We are seeking out a “plentiful” level at the clinic as well. Especially with the expanded symptoms list, please no longer hesitate to order COVID testing for any symptomatic patient. (See attached UDOH guide received today for additional info)
5. The COVID Fact Sheet is now in the patient handouts section of EMR to be sent by portal if you wish
