

business activities and providing a useful source of financial data. It should have the same accounting cycle as the other systems in the organization and adhere to the same accounting standards. Should it have the same working capital, working capital, and other financial ratios as well as the other systems in the organization?

Another method used to evaluate the financial performance of a company is the ratio analysis. This involves comparing the financial ratios of the company to the ratios of other companies in the same industry. This can be done by comparing the company's ratios to the industry averages or to the ratios of a specific competitor. This can help to identify areas where the company is performing well and areas where it is performing poorly.

1. To determine the financial performance of a company, the following ratios should be calculated for each of the following years:
 - a. The current ratio of the company for each year to determine the company's ability to pay its short-term obligations.
 - b. The debt to capitalization ratio for each year to determine the company's financial leverage.
 - c. The return on equity ratio for each year to determine the company's profitability.
 - d. The return on assets ratio for each year to determine the company's efficiency in using its assets.
 - e. The return on investment ratio for each year to determine the company's ability to generate a return on its investments.
 - f. The return on capital employed ratio for each year to determine the company's ability to generate a return on its capital.
2. To determine the financial performance of a company, the following ratios should be calculated for each of the following years:
 - a. The return on equity ratio for each year to determine the company's profitability.
 - b. The return on assets ratio for each year to determine the company's efficiency in using its assets.
 - c. The return on investment ratio for each year to determine the company's ability to generate a return on its investments.
 - d. The return on capital employed ratio for each year to determine the company's ability to generate a return on its capital.

In order to compare the financial performance of a company to the financial performance of other companies in the same industry, the following ratios should be calculated for each of the following years:

The following ratios should be calculated for each of the following years to determine the financial performance of a company:

These ratios are used to determine the financial performance of a company. The return on equity ratio is used to determine the company's profitability. The return on assets ratio is used to determine the company's efficiency in using its assets. The return on investment ratio is used to determine the company's ability to generate a return on its investments. The return on capital employed ratio is used to determine the company's ability to generate a return on its capital.

The following ratios should be calculated for each of the following years to determine the financial performance of a company:
