

Your participation can help us learn more about preventing severe or acute illness from RSV

Find out today if the *VANIR Study* is right for you!

Learn about a new investigational vaccine called **MVA-BN-RSV** and whether it can protect people from getting seriously ill from Respiratory Syncytial Virus, or RSV. RSV can cause severe or acute respiratory illness in older adults.

You may be able to join the study if you:

- Are 60 years of age or older
- Are healthy or have one or more chronic medical conditions, including mild to moderate underlying illnesses such as chronic cardiac diseases, lung disease, congestive heart failure, hypertension, and type 2 diabetes mellitus
- Are willing and able to use a smartphone or tablet application to record information during the study

Other criteria will need to be met to confirm your eligibility for this study.

If you qualify, you may receive at no cost:

- The study vaccine or placebo
- Close care and follow-up throughout the study
- Reimbursement for study-related expenses (such as travel and meals)
